## DETAILED ACTION

### *Drawings*

1. Figure 3 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.
2. New corrected formal drawings are required in this application because Figure 2 has handwritten corrections.

### *Allowable Subject Matter*

3. Claims 1-6 are allowed.
4. The following is an examiner's statement of reasons for allowance: The Examiner agrees with Applicant's arguments stating the deficiencies in the prior art to teach the relation in the claimed invention being satisfied. Regarding claims 1 and 4, the previously applied references (Maishev et al. US 6,037,717 and Bright et al. US 5,554,852), as well as the prior art, fail to teach or fairly suggest, in addition to the accompanying features of the claims, an ion source comprising a plasma production vessel which serves as an anode, a filament, a reflector, and a magnet wherein *a relation  $L < 3.37B^{-1}\sqrt{V_A} \times 10^{-6}$  is satisfied where the distance from the center of the filament to the wall of the ion source is less than the Larmor radius of an electron.* The Applicant teaches that by satisfying the above stated condition, the probability of a high energy electron colliding against the wall face of the ion source is increased, which shortens the

life span of the high-energy electrons and allows for the ratio of molecular ions in plasma to be enhanced.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US 6,037,717, US 5,554,852, US 5,455,081, and US 4,743,804, all of which pertain to ion sources where the Larmor radius of ions and electrons are addressed.
